

WESTCHESTER COUNTY, NEW YORK

LEGEND

- Yields 10-100 Gallons per Minute
- Yields >100 Gallons per Minute
- County Parks

NOTE: Map data automated and/or obtained from several state and federal agencies, as well as developed by Westchester County GIS. Unconsolidated Aquifers (UQA) data was obtained from NYS GIS Clearinghouse (www.nysgis.state.ny.us) and created by NYS Department of Health, Bureau of Public Water Supply Protection. The data set consists of aquifer polygons or regions depicting unconsolidated aquifers in New York State, excluding Long Island. Original vector network representing unconsolidated aquifer limits was available from the Low-Level Radioactive Wastes program (LLRW) which was digitized over USGS Topographic Maps at a scale of 1:250,000 (1989). This data set captures the remaining information contained in the original paper maps. Unconsolidated aquifers less than one square mile or yielding less than ten gallons per minute were not captured in the original data. Lakes and streams data obtained from NYSDEC (2007), road and municipal boundary features from NYS/DOIT (1990). All data processed with either ARC/INFO or ArcView software and is intended to be used for GENERAL PLANNING PURPOSES ONLY. For more information contact Westchester County GIS at: <http://www.westchester.gov>.
